Documentation Beta

Presentation:

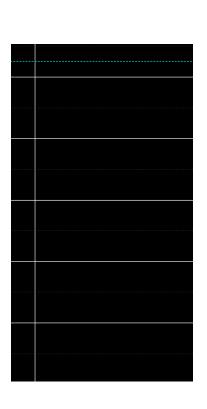

Dynafood is an app which helps you get information out of the product you buy or eat. Dynafood also provides users a way to customize what the app knows of you, special diet or allergies.

How to use Dynafood:

Login & Register

To use the app, you will have to register yourself or log in. Enter your credentials in the text field.

For registration, you must enter a valid email and your password must contain numbers and special characters.

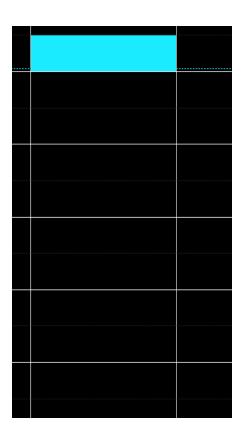

Main Page

After login you will find the homepage with every information you need. On the top of the screen, you will see trending products scanned by other users, you can always click on the item to see the product's details.

Below starts the History of your scan. We keep here the last items you scanned in case you need to find back the details without having to re-scan them.

At the bottom of the screen is the button to go to the scan.

Scan

Once the button is pressed your camera will open and then just aim the camera to the barcode of the product you want to scan.

Product Information

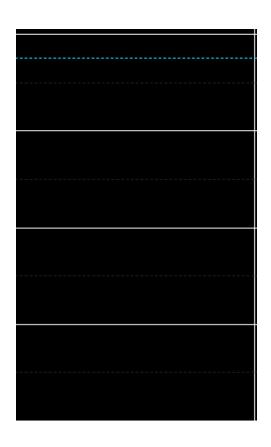

On these two screen, you will find information about the product

you scanned, with labels if there is, and a nutrition table.

Alert Notification

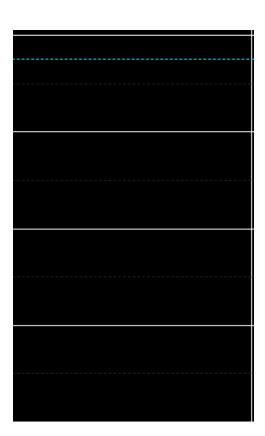

Based on your preferences set in the settings, we will warn you if you scanned a product which is not included in the diet/allergies you set.

Settings

The settings page is accessible by hitting the $\stackrel{*}{\Rightarrow}$ icon at the top right of the screen.

You can find there different options to change and the list of all the diet/allergies to choose from.

Feedback

If you enjoyed using Dynafood or if you have any suggestions about the app, please fill out the form to give us your opinion.
